

Private Practice Opportunity in Seattle

Join a growing, multi-site private practice based in Seattle, Washington that is expanding our knowledge and methods for assessing and treating individuals with multiple problem areas. The position we are seeking to fill is located in our Seattle (Pioneer Square office).

Brain Health Northwest's **vision** is to provide premier professional mental health professional services that integrates our client's unique biology, psychology, sociology, cultural, and spiritual experiences to heal their mind and body. **Our mission** is to create and offer a highly effective place to heal the mind and body by integrating the art and science of clinical psychology and nervous system physiology.

- By bringing together highly trained and experienced clinical and forensic psychologists, neuroscientists, and mental health counselors
- By applying the advancements of psychotherapy, neurotherapy, and nervous system physiology
- By providing services that heal the mind, regulate the nervous system, and optimize performance

We are seeking a colleague who shares this vision and is dedicated to changing the paradigm for helping individuals with difficult problems. Our current staff composition includes four clinical psychologists, all of whom are also trained in neuropsychology and/or clinical neuroscience. Our staff also includes a full-time clinical neuroscientist, licensed mental health counselors, a psychometrist/EEG technician, and office manager.

Qualifications:

Licensed or license-eligible in a qualifying profession. A Washington State license in a qualifying profession must be obtained before beginning clinical work. Supervision for licensure as a psychologist, LMHC, or LICSW is available so long as the person qualifies for another underlying credential.

BCIA mentoring/supervision is available and it is expected that a successful candidate will obtain this credential within 6 months of employment.

Following is a list of desirable knowledge/skills. Note that it is not necessary to meet all of them to be a successful candidate, but stronger candidates will have two or more and be committed to developing other knowledge/skill areas:

- Experience in physiological measures/interventions such as EEG, HRV, and peripheral biofeedback.
- Knowledge of current research and intervention methods including cognitive behavioral methods, behavior therapy, group methods, and DBT.
- Knowledge and experience in trauma-informed care including EMDR and somatic-based modalities.
- Knowledge and experience in scientifically-based risk assessment including static, dynamic and protective factors and procedures.
- Research interests and experience consistent with our own clinical trials/research foci is desirable. BHNW conducts an annual review and plan for conducting internal research and clinical trials.

- Knowledge and experience conducting internal program evaluation procedures and/or marketing analytics.

In addition to an extensive library of psychological tests and other instruments, following are some of the technological resources available to clinicians at BHNW for clinical and research uses:

- Four 24-channel EEG workstations using BrainMaster and Mitsar amplifiers. Software analysis packages include BrainDX, Neuroguide, WinEEG, New Mind, and Jewel.
- Additional dedicated EEG clinical treatment packages include four 2-channel Cygnet systems for slow cortical potentials training, three 2-channel and one 4-channel BrainMaster Atlantis systems for surface amplitude training.
- Two VR systems.
- Thought Tech peripheral biofeedback system.
- HRV and capnometry.
- Neurotracker 3D Multiple Object Tracking system.
- Two tDCS systems.
- pirHEG biofeedback.
- AVE and CES systems.
- Three photobiomodulation units.

Financial Considerations:

BHNW is a for-profit LLC. Clinicians in the Seattle office are enrolled as W2 employees of the corporation with a compensation package configured to account for overhead expenses, supervision costs, and revenue generated. A graduated costs participation schedule is available to assist the successful candidate during the early months when revenue generation is unlikely to cover these costs. Assistance in networking, referral generation, and practice development will be provided. The successful candidate will be expected to take an active role in program development, marketing and clinical knowledge acquisition when not engaged in direct services.
